

TITANTRAX[®] SHIELD

ENGINEERED FOR SPORT

TITANTRAX[®] SHIELD

STRONGER. BETTER. WORKS HARDER. GOES FARTHER.

The TitanTrax Shield[®] forms a long term cover over your court to fix the cracks & to make sure that new cracks do not appear.

Shield protects the pavement below from the elements & further deterioration.

Other repair processes, such as individual crack repair systems, treat only the small areas around the cracks on your tennis court. The entire court is then resurfaced to appear new. However, many times the repaired cracks will elongate and/or new cracks appear elsewhere on the tennis court after the repair (sometimes in less than a year). You may be left with new color and the same old crack problems.

The TitanTrax Shield[®] is cost effective and better than any other crack repair method for a long term life cycle.
